## INTRODUCTION

The Publishing Data Interest Group brings together all stakeholders involved in publishing research data including researchers, discipline specific and institutional data repositories, academic publishers, funders and service providers. Every effort will be made to get a good representation from related international programmes, their working groups and other private or institutional activities involved in this area. We will build on existing resources, reports and other shared experiences from the different stakeholders and will nurture more specific and targeted working groups addressing practical aspects in publishing research data. As such, the Publishing Data Interest Group can be regarded as a broad and inclusive forum for interested individuals to contribute to and test, validate and promote the findings of the Working Groups. In particular we plan to address the implementation of workflows for publishing data and therefore help establish appropriate supporting infrastructure.
